

WAYS TO RUN A TRACKWRESTLING EVENT

BASIC PAPER

This is the most basic way to run an event on Trackwrestling. One administrative computer with an internet connection is needed. This computer can be located at the head table or in a room away from the wrestling area such as a classroom or computer lab. A wired or wireless internet connection can be used and a printer is required to print bout sheets, brackets and a few other items. Larger tournaments may require additional computers. The bout sheets will be printed and taken to each mat. The completed bout sheets will be returned after a match is completed and the results will be entered into Trackwrestling from the administrative computer. This will update brackets, generate match-ups for the next round, calculate team points, etc. The next round of bout sheets can then be printed and the process will continue until completion of the tournament.

YOU WILL NEED:

- Computer
- Internet Connection
- Printer

BASIC ELECTRONIC BOUTS

An electronic tournament allows you to eliminate the need to run paper bout sheets back and forth to the tables. The administrative computer requirements are the same as a basic paper tournament but one computer that can connect to the internet is needed at each mat. Matches are scored live from each mat and brackets and any team points are immediately updated. A printer for printing updated brackets and a few other documents is needed. The Trackwrestling dashboard will be available for fans to follow the progress of the event online in real time score by score.

YOU WILL NEED:

- Administrative Computer
- Matside Computers
- Internet Connection
- Printer

LIVE VIDEO STREAMING

You can also integrate the electronic scoring system with a live video stream when running electronic bouts. Match details will be displayed on the video so viewers will see the name and team of each wrestler along with the time, score, period, etc. The video streaming option will require integration from www.flowrestling.org and may have additional costs. You can request more information regarding costs and requirements by contacting adam@flocasts.com

YOU WILL NEED:

- Administrative Computer
- Matside Computers
- Internet Connection
- Printer
- Additional equipment as required by Flowrestling

ELECTRONIC BOUTS WITH TRACKWRESTLING SCORE CLOCKS

This method is the same as running an electronic tournament with the addition of plugging a Trackwrestling score clock in to the matside computer so everything is completely integrated. Match details such as score, time and period will update on the score clock and dashboard right from the matside controller. Other match details such as weight class and bout numbers can also be displayed on the score clock. Matches are scored live from the matside controllers and brackets and any team points are immediately updated. Since the score clock is integrated with the matside computer, there is no need to have a clock operator separate from the person scoring the match and therefore you can get by with one less volunteer. You can request more information on score clocks by contacting sales@displaydimensions.com

YOU WILL NEED:

- Administrative Computer
- Matside Computers
- Internet Connection
- Printer
- Trackwrestling Score Clocks

These are the most common methods of running a Trackwrestling event but there are also other variations. Please contact us at trackwrestling.com/tickets with any questions.
